Summary

AI Automation Specialist with 3+ years of experience in designing and implementing AI-driven business processes. Passionate about analyzing workflows and turning complex, manual operations into scalable, production-ready automation solutions. Proficient in low-code platforms including Make.com, Zapier, and n8n. Skilled in API integrations, webhooks, and CRM systems to deliver end-to-end automation across sales, marketing, and customer support. Experienced in building AI assistants and Copilot-style agents using modern AI platforms. Strong foundation in Agile project management with a proven ability in cross-functional collaboration, stakeholder management, and process documentation.

Work Experience

Hyfindr GmbH, Stuttgart, Germany

Feb 2024 - Present

AI Product Owner

AI Customer Support Chatbot

- Developed an AI-powered conversational assistant in Voiceflow that automated 40% of customer replies and reduced average response time by 70%.
- Analyzed user intents and continuously optimized training data to improve answer quality and reliability.
- Delivered performance reports (response accuracy, engagement rate) to stakeholders for continuous improvement.

AI Powered Search Integration

- Built a proof-of-concept data extraction pipeline using Python and LangChain to extract structured data from technical datasheets using LLMs and store the extracted data in MySQL.
- Led a team of five on a project to develop an AI-powered search feature for the Hyfindr website, allowing supplier and product discovery using natural language.
- Translated business requirements into technical solution workflows through Agile methodologies (backlog grooming, sprint planning, release testing).
- Improved user engagement by 25% and increased product discovery satisfaction by 50% within three months.

Hyfindr GmbH, Stuttgart, Germany

Sep 2022 - Jan 2024

AI Automation Specialist

- Designed and implemented a fully automated sales and marketing workflow in Brevo CRM using Make.com and SnapADDY, integrating leads from trade fairs, events, and website inquiries.
- Automated core sales stages, including deal creation, follow-up task generation, and pipeline tracking, reducing manual workload by 30%.
- Implemented automated internal and customer-facing email workflows using n8n to improve operational efficiency.

- Developed a Rovo AI agent in Jira that converts incomplete or poorly written ticket drafts into well-structured issues using internal ticket-writing guidelines and knowledge resources, automatically detecting missing fields and providing real-time improvement suggestions.
- Customized Microsoft Dynamics 365 by creating custom entities, defining field mappings, and implementing workflow automations aligned with business requirements.
- Migrated contacts, companies, deals, and activity records from Microsoft Dynamics 365 to Brevo CRM, including structured data mapping, validation rules, and data integrity checks.
- Created documentation and supported internal teams in adopting automated processes and structured workflows.
- Continuously evaluated emerging AI and automation tools to identify opportunities for improving internal workflows and automation.

Hyfindr GmbH, Stuttgart, Germany

Jan 2023 - Jan 2024

Business Development Specialist

- Onboarded 50+ international B2B vendors to the Hyfindr marketplace, contributing to a 25% increase in platform sales.

Personal Projects

Zero-Cost AI-Driven Lead Qualification Process

Jun 2025

- Built a fully automated lead-qualification pipeline using free-tier tools (Make.com, Tavily, Airtable, HubSpot) to collect, enrich, and route inbound leads.
- Used an AI model to perform automated lead scoring based on inquiry intent and industry relevance for hydrogen-sector vendors.
- Reduced manual lead screening by 80% by automatically routing high-scoring leads into HubSpot.
- GitHub: github.com/jerryn-joy/lead-qualification-pipeline

AI Sales Analyst Agent

Aug 2025

- Built an AI agent in n8n that analyzes Excel-based sales datasets, validates user inputs, and answers natural language data queries.
- Integrated memory to maintain context across messages.
- GitHub: github.com/jerryn-joy/ai-data-analyst-chatbot

Education

RWTH Aachen University, Aachen, Germany

Master of Science in Computer Aided Mechanical Engineering

Oct 2017 - Sep 2021

Pune University, Pune, India

Bachelor of Engineering in Mechanical Engineering

Jun 2012 - May 2016

Awards

Winner - Black Forest Hackathon (LIEBHERR)

May 2025

- Developed an AI system to automate supplier certificate checks and reduce manual review time using MegaParse, GPT-4, and MySQL.

Skills

Technical Skills

- Automation Platforms: Make.com, n8n, Zapier, Microsoft Power Automate, Copilot Studio, Voiceflow
- AI & LLM Technologies: OpenAI APIs, Prompt engineering, LangChain, Retrieval-Augmented Generation (RAG), AI agents
- Integrations & APIs: REST APIs, Webhooks, JSON, OAuth2
- CRMs & Data: Microsoft Dynamics 365, HubSpot, Brevo, Airtable, MySQL
- Programming: Python

Language Skills

- English - C2
- German - B2

Certifications

- Building Solutions with Microsoft Copilot Studio - LinkedIn Learning
Learned to build custom copilots with integrated workflows, connectors, and conversational logic.
- LangChain: Retrieval-Augmented Generation - DeepLearning.AI
Gained hands-on skills in designing and implementing RAG pipelines using LangChain for custom data.
- SQL for Data Engineering - LinkedIn Learning
Gained foundational SQL skills in querying, data manipulation, and user access management.
